OLD COLONY TRAFFIC VOLUMES REPORT

1995 – 2025

OLD COLONY
PLANNING COUNCIL

Old Colony Planning Council | 70 School Street, Brockton, MA 02301

This report was prepared under contract No. 131260 with the Massachusetts Department of Transportation (MassDOT)

ACKNOWLEDGEMENTS

The preparation of this report has been financed in part through grants from the Federal Highway Administration and Federal Transit Administration, U.S. Department of Transportation, under Metropolitan Planning Program, Section 104(f) of Title 23, U.S. Code, under Contract No. 131260.

The views and opinions of the Old Colony Planning Council expressed herein do not necessarily state or reflect those of the U. S. Department of Transportation.

The ***Old Colony Traffic Volumes Report (1995-2025)*** was prepared by the following members of the Old Colony Planning Council staff under the supervision of Charles Kilmer, Deputy Director/Transportation Program Manager, and the direction of Mary Waldron, Executive Director.

TABLE OF CONTENTS

Section I Introduction, Code Key Index, Volume Projection Formulas

Section II Traffic Volumes by State Numbered Route

Section III Local Traffic Volumes by Community

Section IV State Numbered Route Traffic Growth Rate

Appendix

- Old Colony Planning Council Traffic Count Request Form
- Average Annual Daily Traffic Map
- Regional Highways Map
- Roadway Functional Classification Map

INTRODUCTION

INTRODUCTION

Transportation Planning requires traffic counts. The information obtained from these counts enables planners and engineers to study existing road and highway conditions and traffic circulation. The ability to project future traffic volumes provides the opportunity to identify potential problems before they develop as well as seek solutions to existing situations. Traffic counts help validate traffic model forecasts.

The ***Old Colony Traffic Volumes Report (1995-2025)*** contains the most up-to-date traffic counts from a variety of sources; annual percentage growth rates for state numbered highways; and the methodology necessary to project future traffic volumes on the road network.

The ***Old Colony Traffic Volumes Report (1995-2025)*** contains traffic information from the past 30 years from a variety of sources including Old Colony Planning Council, Massachusetts Department of Transportation (MassDOT), and various consulting and engineering firms. A traffic flow map utilizing a "band width" scale (see Appendix) illustrates the volumes on major roadways in the region and surrounding areas. The traffic volumes on this map are based on recent traffic counts and factored historical count data.

During each count season, the completed Automatic Traffic Recorder (ATR) counts are uploaded to the Transportation Data Management System (MS2). MS2 is a tool developed by MassDOT to organize traffic count data. It allows the ability to upload data from a traffic counter; view graphs, lists and reports of historic traffic count data; search for count data using either the database or the Google map; and print or export data to your desktop. The process of storing count data in MS2 involves collecting traffic count data, uploading count data, verifying count data quality, and assigning count data to count locations.

TRAFFIC VOLUMES

The traffic volumes in this report are presented either by **Average Daily Traffic (ADT)** or **Average Annual Daily Traffic (AADT)**:

Average Daily Traffic (ADT)

The average volume of a 24 hour period based on several days of counting during a weekday (not including a Saturday or Sunday) is considered **ADT**. Typically, this is found as the average number of vehicles for a weekday (24 hours, non-weekend or holiday) collected over a 24 to 48 hour period. OCPC traffic counts are not seasonally adjusted and therefore represent Average Daily Traffic (ADT).

Average Annual Daily Traffic (AADT)

The average annual daily traffic is the average volume of a 24-hour period based on traffic counts taken on various days during different seasons. These counts are usually obtained at permanent count locations and adjusted based on a seasonal factor. These counts represent a typical weekday and do not include Saturday or Sunday traffic. MassDOT traffic counts are usually AADT and developed based on a seasonal factor (except Route 3 and Route 24 on/off ramps).

Both the ADT and AADT can be measures of the traffic volume on a road in either one or both directions of travel. The volumes in this report represent total volume (both directions of travel). OCPC and MassDOT conduct these counts on a regular basis throughout the region. Section II of this report contains traffic volumes on state numbered routes and Section III contains traffic volumes on all other roadways.

CODE KEY INDEX

Route # **-** State Route Number given where appropriate.

Community **-** City or Town in which traffic count was taken.

Street **-** Street on which traffic count was taken.

Location **-** Specific geographic location of the traffic counter.
"C/L" and "T/L" denote City Line and Town Line respectively.

Year **-** Year in which traffic count was taken.

Date **-** When available, the first day the traffic count was taken (M/D/Y).

Dir **-** Direction; All traffic counts listed are for total of both directions or total Average Daily Traffic (ADT) unless otherwise noted by NB (Northbound), SB (Southbound), EB (Eastbound) or WB (Westbound).

Source **-** Traffic count data source (e.g. what entity conducted the traffic count).

- OCPC – OCPC traffic counts commencing January 1994.
- MassDOT – MassDOT MS2.
- Other - (consultants, engineering firms, impact studies, etc.).

Average Daily Traffic **(ADT) –** The average volume for a 24-hour period (one weekday). Usually derived from a 48-hour weekday volume count, and not seasonally adjusted.

Average Annual Daily Traffic **(AADT) -** The average daily volume (24 hours) for a roadway usually based on permanent counters and data collected year round. This average is adjusted based on a seasonal factor.

Peak Hour Volume **-** The hour for which traffic volumes are the greatest. Typically, two peak hours are determined: one for the morning and one for the afternoon.

V/C Ratio **-** The ratio of Peak Hour Volume to the hourly capacity of the roadway.

85th Percentile Speed **-** The speed at or below which 85 percent of all vehicles in the sample area are traveling.

Heavy Vehicle Percentage **-** Represents buses and vehicles with six or more tires. The percentage of heavy vehicles in the traffic flow volumes.

U/R **-** Federal Aid Urban/Rural Designation.

FUNCTIONAL CLASSIFICATION CODE

0 ***Local*** – Roadways with the primary function to provide access to adjacent land, and roads that provide service for relatively short distances. Local roads include all roads not classified as part of the principal arterial, minor arterial, or collector system.

1 ***Interstate –*** Limited access facilities that serve as principal arterials providing service to substantial regional, statewide, and interstate travel.

2 ***Principal Arterial –*** Major divided highways that serve corridor movements having trip lengths and travel densities characteristic of interstates.

3 ***Urban Principal Arterial or Rural Minor Arterial –*** Roadways with regional and statewide significance that link cities and large towns, forming an integrated network on the county level.

5 ***Urban Minor Arterial or Rural Major Collector –*** Roadways that provide service to cities, towns, and other traffic generators not being served by the arterial system, roads that link these places with the arterial system, and roads that serve the inter-county travel corridors.

6 ***Urban Collector or Rural Minor Collector –*** Roadways that bring traffic from local roads to collector roads, and roads that provide service to small communities and link local traffic generators to the rural areas.

In order to interpret the functional classification of a particular road, one must consider the following: accessibility and mobility, density and types of land use, density of street and highway network, nature of travel patterns, and the manner in which all of these elements are related to the definition of highway function. Additionally, one must take into account the particular urban/rural designation.

VOLUME PROJECTION

A. To calculate future volume use this formula:

$$FV = BV \times (1 + (AG\% \times 100))^{(DY - BY)}$$

Where:

FV = Future Volume | BV = Base Year Volume | AG = Annual Growth %

DY = Desired Year | BY = Base Year

Example – Find FV Where:

BV = 10,000
AG = 5%
DY = 2005
BY = 1998

$FV = BV \times (1 + (AG\% \times 100))^{(DY - BY)}$

$FV = 10{,}000 \times (1 + (5\% \times 100))^{(2005-1998)}$

$FV = 10{,}000 \times (1 + .05)^{(2005-1998)}$

$FV = 10{,}000 \times 1.05^{7}$

$FV = 14{,}071$

B. To calculate previous volume use this formula:

$$PV = BV \times (1 + (AG\% \times 100))^{(BY - DY)}$$

Where:

PV = Previous Volume | BV = Base Year Volume | AG = Annual Growth %

BY = Base Year | DY = Desired Year

Example – Find PV Where:

BV = 14,701
AG = 5%
BY = 2005
DY = 1998

$PV = BV \times (1 + (AG\% \times 100))^{(BY - DY)}$

$PV = 14{,}071 \times (1 + (5\% \times 100))^{(2005-1998)}$

$PV = 14{,}071 \times (1 + .05)^{(2005-1998)}$

$PV = 14{,}071 \times 1.05^{7}$

$PV = 10{,}000$
